MATERIAL EVENT  
AGROSUPER S.A.  
Registration in the Securities Register N° 1084

Ms. Solange Berstein Jáuregui - Chairperson

Financial Markets Commission  
Avenida Libertador Bernardo O'Higgins N° 1449, piso 11

Dear Ms. Berstein,

In accordance with the provisions of article 9 and paragraph two of article 10 of Law 18.045, of the Securities Market, and General Standard No. 30 of the Financial Market Commission (CMF), and being duly empowered to do so, I write to inform you of the following Material Event for Agrosuper S.A. ("Agrosuper" or the "Company"):

Recently a routine internal health prevention check, in one of the chicken production sectors at a chicken breeding facility in the O'Higgins Region revealed some deviations in one of the parameters, this immediately triggered the corresponding protocol together with the Agriculture and Livestock Service (Servicio Agrícola y Ganadero, SAG), which confirmed a positive case of avian influenza in that sector.

Consequently, the Avian Influenza Contingency Plan that had been established for this eventuality, was put into effect, this involves taking to their extreme the existing biosecurity measures in order to contain and control the outbreak and seek to avoid it spreading to other production facilities. The nearby poultry sectors have been intensively monitored, and no new cases have arisen so far.

As a result of this situation, and as a preventive measure, SAG decided to suspend the certification for exporting poultry of Chilean origin for a 72-hour period.

Episodes like these arise from time to time around the world, as has been the case in countries like the United States, Colombia, Peru and Ecuador. The phenomenon is associated with migratory birds from the northern hemisphere, that include Chile in their migratory route, thereby exposing us to this type of situation during the summer season.

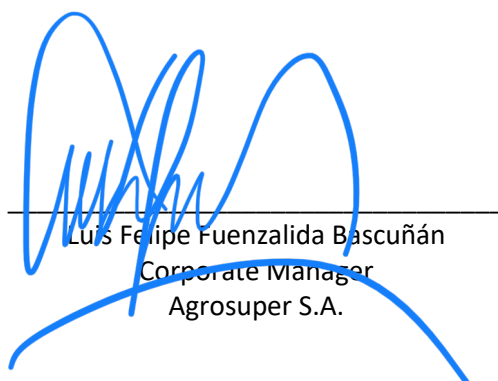

It is important to emphasize that it is completely safe to eat chicken meat and that the consumption all the products is completely innocuous, a fact that has been ratified numerous times by the relevant expert organizations.

According to the information currently available, the economic impact of this situation is limited to the cost of slaughter in the production sector involved, which comprises a total of 41,400 breeding hens at an estimated value of USD 435,000 -this is equal to 0.16% of all the chickens that the Company has on its farms-. Additionally, there are costs associated with mitigation measures of around USD 800,000.

The evolution of this contingency and the date of resumption of the SAG certificates to export to the different markets, will enable us to determine the future economic impact.

Should any further information emerge, we may need to complement the above information.

Yours sincerely,

Luis Felipe Fuenzalida Bascuñán  
Corporate Manager  
Agrosuper S.A.
